DETAILED ACTION

1. Claims 1-15 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Independent Claim 1 and 11, are allowable over the prior art of record since the cited references taken alone or in combination do not teach or suggest: a method for minimizing the cycle time of a burnish test cycle, comprising: *determining whether the measured resistance of the MR head indicates the bead has clearance between the air-bearing surface of the slider and the recording surface; and when clearance between the air-bearing surface of the slider and the recording surface is not detected based upon the monitoring of the resistance measurements of the MR head, lowering a fly-height between the back portion of the air-bearing surface of the MR head and the recording surface and executing burnishing operations on the back portion of the air bearing surface to remove material from the back portion of the air-bearing surface until the monitoring of the resistance measurements of the MR head indicates the air-bearing surface of the slider has clearance above the recording surface*, in combination with the other limitations in the claim.

Independent Claim 6, is allowable over the prior art of record since the cited references taken alone or in combination do not teach or suggest: a drive controller for minimizing the cycle of a burnish test cycle, comprising: *“determining whether the measured resistance of the MR head indicates the bead has clearance between the air-bearing surface of the slider and the recording surface; and, when clearance between the air-bearing surface of the slider and the recording surface is not detected based upon the monitoring of the resistance measurements of the MR head, for lowering a fly-height between the back portion of the air-bearing surface of the MR head and the recording surface and executing burnishing operations on the back portion of the air bearing surface to remove material from the back portion of the air-bearing surface until the monitoring of the resistance measurements of the MR head indicates the air-bearing surface of the slider has clearance above the recording surface”* in combination with the other limitations in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Smith (US 6,417,981); Felts et al. (US 5,863,237); Gillis et al. (US 6,359,433); Li et al.
